

New Business Initiatives - CDS Sri Lanka

Centralized eGM Services

- The current fragmented approach to managing AGMs and EGMs in Sri Lanka presents challenges for both issuers and shareholders.
- A centralized platform can address these issues by standardization, efficiently streamlining administrative tasks for issuers, protecting shareholder data and voting rights and providing equal opportunities for all shareholders to participate for the meetings.

Data Analytics & a Real Time Dashboard for Issuers

- Currently, listed issuers and other CDS stakeholders rely on standard, static reports provided by the Central Depository Systems (Pvt) Limited (CDS), limiting their ability to analyze shareholder/investor trends, identify opportunities/risks, and optimize corporate actions.
- CDS proposes to significantly enhance its service offering to issuers and subsequently for other CDS stakeholders by providing real-time analytics, customized reporting, and a dedicated dashboard. This initiative aims to take advantage of and monetize the dataset maintained by CDS.
- The CDS will be able to deliver actionable insights, empower issuers to make informed decisions, easily identify disclosure requirements set out by regulators and optimize their operations.

Company Secretary/Registrar Portal

- The CDS aims to create a platform that empowers company secretaries and registrars of listed issuers to manage deposit and report requests in a decentralized fashion.
- This initiative suggests a shift from a centralized system to a more distributed approach regarding the share certificate deposit confirmations and for standardized report requests.
